Annual Budget 2027

Andino Logística S.A. | Document F01 | Date: 2026-10-01

Budget summary

The approved 2027 budget amounts to UYU 1,120 million in revenue and UYU 985 million in operating costs. An investment of UYU 160 million in fleet and warehouses is planned. The projection assumes 9% volume growth and a 6% rate adjustment.

Item	2027 amount
Revenue	UYU 1,120 million
Operating costs	UYU 985 million
Expected operating result	UYU 135 million
Investment in fleet and warehouses	UYU 160 million

Main assumptions

- 9% growth in transported volume compared with 2026, concentrated in the refrigerated segment.
- 6% rate adjustment, applied quarterly according to the fuel index.
- Payroll estimated at UYU 405 million, including the year-end bonus and social security contributions, which covers the salary adjustment planned for the year.
- Fuel cost stable in real terms, with an efficiency gain from the partial renewal of the fleet.

Operating costs

The operating costs of UYU 985 million comprise personnel, fuel, maintenance, insurance, rent and outsourced services. Most of them correspond to personnel and fuel. Costs are reviewed quarterly against actual results and reported to the board.

Investment

The investment of UYU 160 million is earmarked for fleet renewal and warehouse improvements. The detail of the refrigerated truck purchase is in the 2027 fleet investment plan, which is subject to board approval.

Risks

The main risks of the budget are fuel price changes, the loss of large accounts and lower volume growth. Finance proposes reviewing the budget at the end of the first semester.

Monitoring calendar

The budget is monitored at four points: the close of each quarter, the mid-year review, the October adjustment and the annual close. At each of them Finance compares actual results with the budget, explains deviations and proposes corrective measures to general management. Significant deviations are reported to the board.

Responsibilities by area

- Operations: control fuel, maintenance and fleet operating hours.
- Sales: meet the commercial quota and keep rates within the discount policy.

- HR: manage headcount as planned and control overtime.
- Finance: consolidate execution, manage cash and handle financing.

Sensitivity and scenarios

Finance prepared a conservative scenario with lower volume growth and an optimistic scenario with a larger rate adjustment. In both cases the operating result remains positive, although with different margins. The scenarios are updated when the fuel or demand assumptions change.

Financing

Operating cash and the current credit line cover the planned needs. Fleet investments are evaluated with long-term financing, so as not to put pressure on working capital.

Approval and confidentiality

The budget was approved by the board and is confidential information of the Finance area. It is shared with other areas only in the part that corresponds to their management.
