Margin by Business Line

Andino Logística S.A. | Document F05 | Date: 2026-09-20

Margin by line

The refrigerated margin is 31%, general cargo 18% and last mile 12%. Margins are calculated on the billing of each line, before overhead.

Business line	Margin
Refrigerated	31%
General cargo	18%
Last mile	12%

Last mile

Low-volume last-mile customers have a negative margin, because the cost per delivery is not covered by the current rate. It is recommended to review last-mile rates before January, and to evaluate a minimum billing per customer or a surcharge for low-volume deliveries.

Refrigerated

The refrigerated line is the most profitable, but it requires investment in equipment and constant control of the cold chain. The margin may shrink if energy costs rise or if temperature complaints multiply.

General cargo

The general cargo line keeps a stable margin and provides most of the volume. Its profitability depends on truck occupancy on return trips.
